Submission Issues

Manifested and selected non-manifested findings | SPX-A01-2026-1042 | Review date: October 28, 2026

Data note: *Walmart Inc. is used only as a real-world identity anchor. Submission premises, payroll, fleet, loss and rating values are synthetic training data and are not claims about the real company.*

1. Manifested issues

P2 - Application and SOV location counts conflict

The application and ACORD 130 list four locations, while the Property SOV lists five distinct IDs, A01-LOC-01 through A01-LOC-05. The SOV Summary records a difference of one location; ACORD 140 also lists five premises. Sources: ACORD 125 p. 2; ACORD 130 p. 1; ACORD 140 p. 2; Property SOV cells A5:A9 and SOV Summary B5:D5.

P3 - Workers compensation payroll mismatch

The application and draft quote use $28,600,000 in payroll, while the supporting class-payroll schedule totals $32,400,000. The unreconciled difference is $3,800,000, approximately 13.3% of the declared payroll. The supporting workbook contains 25 class/location rows across five locations. Sources: ACORD 130 p. 2; WC Rating Workbook, Payroll by Class and Rating Inputs; draft quote p. 1.

P6 - Workers compensation experience modifier mismatch

ACORD 130 shows 1.12 as the experience modifier on the application, while the draft quote applies 0.98. The WC Rating Workbook records 0.98 as the prior-term factor effective November 1, 2025 and 1.12 as the current-term factor effective November 1, 2026. Sources: ACORD 130 p. 2; WC Rating Workbook, Experience Mod History; draft quote p. 1.

2. Non-manifested issues

N3 - Workers compensation state allocation conflicts and ACORD 130 schedule is incomplete

The WC Rating Workbook has 25 class/location rows across five locations, but all rows carry state AR, while the SOV identifies locations in Oklahoma, Tennessee and Texas as well as Arkansas. ACORD 130 lists only four Arkansas locations and its displayed class-payroll table is incomplete for locations 03-05 compared with the workbook.

N4 - Workers compensation employee counts differ across form and workbook

For A01-LOC-01, ACORD 130 class counts total 186 full-time and 38 part-time employees, while the WC Rating Workbook totals 147 full-time and 17 part-time for the same location. Both schedules allocate $6,480,000 payroll to that location, while ACORD 125 lists 185 full-time employees for location 01. The workbook totals 735 full-time and 85 part-time employees across five locations.

N5 - Loss details do not reconcile to annual claim counts or WC history

The Loss Detail sheet has 42 unique claim IDs and reported/calculated incurred totals of $6,563,212 with zero row-level incurred variances. Its yearly counts are 9, 9, 8, 8 and 8 for 2021-2025, compared with ACORD 126 counts of 5, 7, 8, 10 and 12. WC loss history also conflicts: ACORD 130 shows eight WC claims every year, while the detail has nine WC claims, all in 2022 and none in the other years.

Non-manifested issues (continued)

N6 - General liability sales and area rating bases lack reconciliation

ACORD 125 and the draft quote use annual gross sales of $184,000,000. ACORD 126 has sales-rated bases of $82,800,000 and $40,480,000, totaling $123,280,000, leaving $60,720,000 without an allocation explanation. A separate 450,000-sq-ft area-rated row does not reconcile to the 250,000 sq ft in ACORD 125 or 625,000 sq ft in the SOV. The WC workbook marks $82.8M as aligned, although it matches only one GL sales row.

N7 - Fleet garaging-state codes conflict with addresses

The fleet schedule contains 186 unique active units, matching the declared count. However, 31 units have Garaging State = OK while their garaging addresses end in Bentonville, Arkansas; all address strings in the column indicate Arkansas. Fleet records also use an address pattern that is not consistently mapped to the SOV locations.

N8 - Driver qualifications need review for heavy-vehicle assignments

The fleet schedule lists 37 tractor/trailer units with GVWR of 52,000 lb. Their assigned primary driver records show 24 drivers with license class Class C and 13 with CDL-B; none of these assignments shows CDL-A. The roster contains 214 unique active drivers and all primary assigned driver IDs exist, but the packet does not provide qualification files or endorsement evidence. Twenty-eight units have a second driver assignment.

N14 - External OSHA record is not matched to the synthetic premises

The public research workbook contains an OSHA establishment record for an Alamo, Texas address. That address is not the same as the synthetic SOV premises, including the Dallas, Texas entry. The record is site-specific and date-sensitive and is not evidence of a violation at any A01 scheduled premises on the supplied information.

N15 - Workers compensation class rates differ across form and workbook

ACORD 130 lists rates per $100 payroll of 0.65 (class 7380), 0.73 (8292), 0.65 (8810), 0.73 (8742) and 0.93 (8017). The WC Rating Workbook lists 0.65, 0.82, 0.14, 0.33 and 0.71 respectively. Only class 7380 agrees; four of five class rates differ. The files do not establish an authenticated carrier rate source.
