Submission Issues

Manifested and selected non-manifested findings | SPX-A02-2026-1042 | Review date: October 28, 2026

Data note: Costco Wholesale Corporation is used only as a real-world identity anchor. Submission premises, payroll, fleet, loss, rating and quote values are synthetic training data and are not claims about the real company.

1. Manifested issues

P2 - Cross-document location-count and property-value conflict

Status: Confirmed

The application declares three locations, while the Property SOV lists four distinct location IDs. Two ACORD 140 versions show conflicting building values. The received copy shows $12,500,000 on the first-premises page and $22,800,000 for location 02; the resubmitted copy shows $14,800,000 in both places. The resubmitted values do not align with the corresponding SOV location values. Sources: ACORD 125 p. 2; ACORD 140 received/resubmitted pp. 1-2; Property SOV.

P4 - Unexplained ACORD 140 version discrepancy

Status: Confirmed

The received and resubmitted ACORD 140 copies share the same submission identifier and most content but differ in the first-premises building amount and location 02 amount in the additional-premises schedule. No change log explains the revisions. Flag an unexplained version discrepancy, not proof of manipulation or fraud. Sources: ACORD 140 received and resubmitted copies.

P5 - Claims / loss-history reconciliation

Status: Confirmed

The loss detail repeats claim identifier A02-CLM-2024-01008 with different loss details. One record has calculated incurred of $242,415; the second has calculated incurred of $171,676 but reported incurred of $231,676. Calculated claim-level incurred totals $6,358,630; reported incurred fields total $6,418,630; the carrier-style summary is $6,193,630. Request authoritative loss-run confirmation. Source: A02 Loss Runs workbook.

P7 - Declared operations versus external public context

Status: Question confirmed; exposure unverified

The synthetic submission describes warehouse retail, receiving, storage, membership sales and general merchandise distribution, and marks pharmacy, optical, gasoline and food-processing operations as not present at the named insured locations. Public company-wide information says some locations offer pharmacy, optical and fuel services. This supports a location-specific scope question, not a conclusion that these exposures exist at the synthetic premises. Sources: broker email, operations/public-record supplement and External Public Research workbook.

2. Selected non-manifested issues matching the Walmart account's issue categories

These findings use the non-manifested issue taxonomy in A01, adapted only where A02 evidence supports the category. Walmart-specific values have not been carried over.

N3 - Workers compensation state allocation conflicts and ACORD 130 schedule is incomplete

Assessment: Partial match; state conflict needs confirmation

The A02 ACORD 130 lists three locations, and its displayed classification/payroll table shows only two classification rows for location 03, compared with the more extensive supporting workbook. The incomplete schedule matches A01 N3. A state-allocation conflict should be asserted only if A02 workbook and SOV establish conflicting state assignments.

N4 - Workers compensation employee counts differ across form and workbook

Assessment: Matching issue

The A02 ACORD 130 and WC workbook show inconsistent employee-count details. For example, the form displays 11 part-time drivers for class 7380 at each shown location, while the workbook shows six per location. The form's displayed classification schedule is incomplete, preventing full location-level reconciliation. Reconcile full-time and part-time counts by location and class.

N5 - Loss details do not reconcile to annual claim counts or WC history

Assessment: Related category; avoid duplicate

A02 has a duplicate claim-ID candidate and unreconciled incurred totals, already covered by P5. Retain P5 as the primary finding. Add N5 separately only if annual claim counts or WC history are independently shown to disagree with loss detail; that additional discrepancy is not established by the evidence summarized here.

N6 - General liability sales and area rating bases lack reconciliation

Assessment: Matching issue

ACORD 125 and the draft quote use annual gross sales of $96,500,000. ACORD 126 has sales-rated exposures of $43,425,000 and $21,230,000, totaling $64,655,000 and leaving $31,845,000 without an allocation explanation. A separate 450,000-sq-ft area-rated exposure also requires reconciliation with the application and property schedules. Sources: ACORD 125 p. 2; ACORD 126 p. 1; draft quote p. 1.

N7 - Fleet garaging-state codes conflict with addresses

Assessment: Matching issue

The A02 fleet schedule contains 13 vehicles coded as garaged in Oklahoma (OK) even though the associated garaging addresses are in Issaquah, Washington. Verify the address, garaging state and rating territory for each affected vehicle before finalizing auto terms. Source: A02 Fleet Schedule workbook.

N8 - Driver qualifications need review for heavy-vehicle assignments

Assessment: Matching issue

A02 has assignments where drivers recorded with Class C licences are assigned to 52,000-lb tractor/trailers. Verify licence class, endorsements, vehicle configuration and applicable jurisdiction requirements. Treat these as exceptions for review, not established violations. Sources: A02 Driver Roster and Fleet Schedule workbooks.

N14 - External OSHA record is not matched to the synthetic premises

Assessment: Matching issue

The A02 public research references an OSHA establishment record whose address has not been established as one of the synthetic insured premises. The record is site-specific and date-sensitive; it is not evidence of a violation at a scheduled synthetic location without exact entity and address matching. Source: A02 External Public Research workbook and operations/public-record supplement.

N15 - Workers compensation class rates differ across form and workbook

Assessment: Matching issue

ACORD 130 and the WC rating workbook show different rates for four of five displayed classes. Class 7380 agrees at 0.65; class 8292 shows 0.73 vs 0.82; class 8810 shows 0.65 vs 0.14; class 8742 shows 0.73 vs 0.33; and class 8017 shows 0.93 vs 0.71. Verify against authenticated carrier-approved rating support. Sources: ACORD 130 p. 2; A02 WC Rating Workbook.

3. Final filtered issue register

Retain all four manifested A02 issues and the selected non-manifested categories that match the Walmart taxonomy, subject to the qualifications noted above.

Type	ID	Issue title	Disposition
Manifested	P2	Cross-document location-count and property-value conflict	Retain — confirmed
Manifested	P4	Unexplained ACORD 140 version discrepancy	Retain — confirmed
Manifested	P5	Claims / loss-history reconciliation	Retain — confirmed
Manifested	P7	Declared operations vs external public context	Retain — question confirmed
Non-manifested	N3	WC state allocation / incomplete schedule	Retain with qualification
Non-manifested	N4	WC employee-count mismatch	Retain
Non-manifested	N5	Loss detail vs annual claim counts / WC history	Do not duplicate P5; add only if independently evidenced
Non-manifested	N6	GL sales and area rating bases	Retain
Non-manifested	N7	Fleet garaging state vs address	Retain
Non-manifested	N8	Heavy-vehicle driver qualification review	Retain
Non-manifested	N14	OSHA record not matched to premises	Retain
Non-manifested	N15	WC class rates differ across form/workbook	Retain

Manifested issues retained	**4**	**Selected non-manifested categories**	**8**

Deduplication and evidence note: P5 already covers A02's confirmed duplicate claim and incurred-total discrepancies. N5 should be separate only if annual claim counts or WC history reveal an additional independently evidenced issue. N3's incomplete schedule is supported, but its state-allocation component requires separate confirmation.

Recommended disposition: Hold the synthetic submission for reconciliation. Resolve the property version/location register, loss history, WC payroll and class rates, fleet garaging, driver qualifications and external-record matching before any authorized underwriting decision.

Source basis: A01_Selected_Manifested_and_NonManifested_Issues.pdf (Walmart issue taxonomy) and the A02 submission files previously reviewed. Findings are limited to the evidence described in the source files; unresolved points are explicitly qualified.
